712 East Athabasca St.

Kamloops, B.C.

V2H 1C9

H.I.S. Ventures Ltd. has undertaken all facets of the implementation of the Kamloops Region portion of the **Provincial Fire Weather Network**. This work put H.I.S. Ventures Ltd. into the forefront of this “High Tech” system. Many of the provincial standards are the result of H.I.S. Ventures Ltd. finding more efficient methods of completing the project. H.I.S. Ventures Ltd. is an expert in the installation and maintenance of both Network and Operational Weather Stations.

H.I.S. Ventures Ltd. has the expertise to install network weather stations at any site in North America. Though we have primarily worked with Forest Technology Systems and their equipment, we have also installed other equipment for clients. The systems involved can include various components such as telephone, cellular, satellite, or radio modem connections.

With the forecast of the next 35 years of “heavier than normal fire activity” it has become critical that weather data collection become an integral tool for forecasting fire behavior. As a result of this, Operational Weather Stations have become necessary and we are able to react to this need in a timely manner. The client can determine if they require automated call-up data or “field read” sites as our goal is to meet the needs of the client. As well, many

agencies are embarking on prescribed burn programs to reduce the problem of fuel loading. An operational weather station allows these agencies to ensure that burning is undertaken under ideal fire conditions, and can be put up and taken down in an efficient and opportune manner.

H.I.S. Ventures Ltd. would be happy to meet with you to review your Weather Management needs for now or in the future.
